

Technology Transfer Track Posters

European Fusion Technology Marketplace

The European Fusion Technology Marketplace results from a partnership between Fusion for Energy (F4E) and EUROfusion, covering international research programmes and projects such as ITER, DEMO, JT-60SA, IFMIF and IFERC.

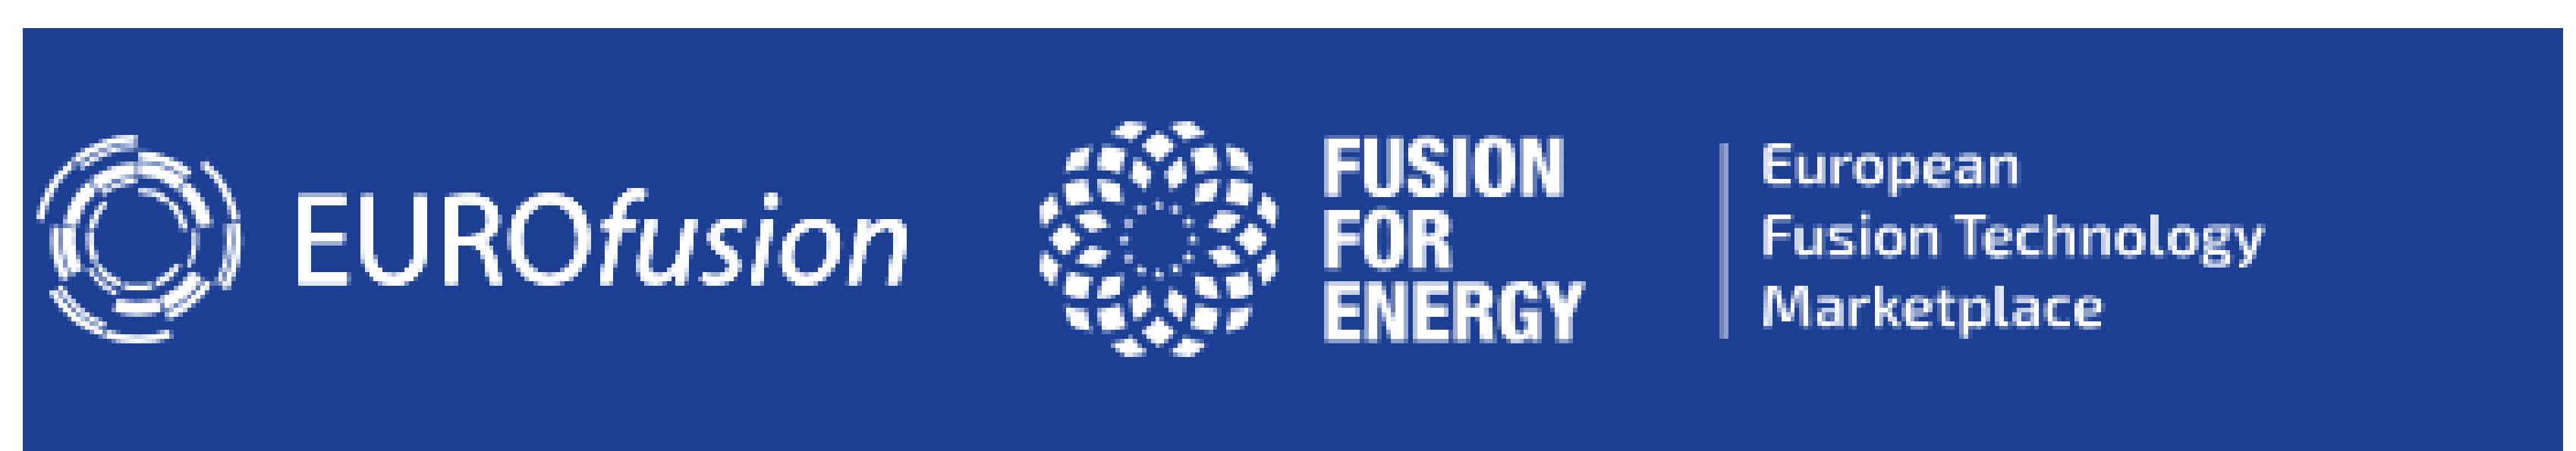

We encourage companies looking for new technologies to discover the breakthroughs in fusion and integrate them into their businesses. Our aim is to promote the technologies developed by Fusion for Energy (F4E) and the European Fusion Laboratories (EUROfusion) by making them widely available and commercially viable to industry.
